What do I want to learn or understand better?

Seeing as week two has been far less demanding than I thought i would be, we haven't done that much this week and thus some of my goals from last week still remain. I feel like I have gotten a better grasp of working agile but my experience from doing Scrum is still very limited and I would still like to expand my git-knowledge a bit further. Our group has also decided to incorporate Maven into our project which is something I am going to have to look into a bit more.

How can I help someone else, or the entire team, to learn something new?

I was hoping I could help the team with managing and understanding how we handle our git repository seeing as I am the host of it.

What is my contribution towards the team's use of Scrum?

For now my contribution is like most of the others in the group in that I mostly participate and try to learn how to get the most out of a scrum meeting.

What is my contribution towards the team's deliveries?

Helping out with the project, making sure we all are aware of the deadlines and trying to see that the git repo contains all that it should. We haven't really gotten started with the user stories on Trello yet so I think that there will be more clarity on exactly what tasks each group member is responsible for in the coming weeks.
